Using Google Earth as a Data Delivery Mechanism

Joe Merritt, GIS Manager, Clinton County Ohio

There is a never ending quest that GIS Managers and users alike undergo; the quest for an easy means of getting people information that they want when they want it in a format that they can use.

With the advent of ArcMap 9.3 and a number of other tools that are available at little to no cost, GIS users now have the means to convert main-stream GIS data into KML file format for use with applications such as Google Earth and ArcGIS Explorer.
